The Ocean and Coastal Economy

Measures of the Ocean and Coastal Economy:
1. GDP (Gross Domestic Product): Value of goods and services that are produced.
2. Employment: # people employed by business establishments, including part-time/seasonal; does not include self-employed workers.
3. Annual Wages: Wages paid to employees.
4. Business Establishments: Individual places of business; single firm may have multiple.

The Coastal economy includes all economic activity that takes place in the geographic area defined as “Coastal Shoreline Counties”.

Coastal Shoreline Counties
The Coastal Shoreline Counties are counties that have a coastline bordering the open ocean, or contain FEMA identified coastal high hazard areas in the Special Flood Hazard Area. Statistics for American Samoa, Guam, Commonwealth of the Northern Mariana Islands, the U.S. Virgin Islands, and Puerto Rico are not included in the reported values.

When to Use
Use Coastal Economy statistics when discussing the economy and population that benefits directly or indirectly from activity in the coastal zone. The coastal economy identifies what is at risk from changing environmental conditions in our oceans and along our coasts.

Bonus Fact
If the US Coastal Shoreline Counties were considered as an individual country, they would rank #3 in global GDP (behind only the U.S. and China) in 2012.

The ocean economy includes six economic sectors that depend on the oceans and Great Lakes. (This is a subset of the Coastal Economy, shown to the right.) This annual time-series data is produced for about 400 coastal counties, 30 coastal states, 8 regions and the Nation using data from the Bureau of Labor Statistics, the Bureau of Economic Analysis, and the Bureau of the Census. Data are currently available for the years 2005 to 2012.

The Six Sectors in the Ocean Economy
- Living Resources
- Ship and Boat Building
- Offshore Mineral Resources
- Marine Transportation
- Marine Construction
- Tourism and Recreation

When to Use
Use Ocean Economy statistics to describe the economic value of activities directly related to the use of ocean resources or access. The Ocean Economy identifies areas where NOAA’s actions can more directly mitigate risks that may impact the US economy.

Bonus Fact
In 2012, the U.S. Ocean Economy employed more people than the Telecommunications, Electric Power Generation, and Home Construction sectors combined.

For more information, please contact PPI.SocialSci@noaa.gov, see page 3 for pocket version
The Coastal Population

The coastal population consists of those living in Coastal Shoreline Counties, which are those counties that have a coastline bordering the open ocean, or contain FEMA identified coastal high hazard areas in the Special Flood Hazard Area. American Samoa, Guam, the Commonwealth of the Northern Marianas Islands, the U.S. Virgin Islands, and Puerto Rico are included in this suite.

When to Use
This geography is helpful in describing the population that is impacted by the coast.

What You Need to Know:
- 39% Percent of the nation’s total population that lived in coastal shoreline counties in 2010 (less than 10% of the total land area excluding Alaska).
- 34.8 million Increase in U.S. coastal shoreline county population from 1970 to 2010 (or a 39% increase).
- 37 persons/mi² Expected increase in U.S. coastal shoreline county population from 2010-2020
